

## Minority Team Report on Draft BAL-001-TRE-01

As applied to Requirement 4, some drafting team members were concerned about establishing a requirement on the Balancing Authority that is beyond the existing obligation under the Protocols (Protocols Section 5.9 was recommended to be used by FERC Order 693). The Balancing Authority in the ERCOT Interconnection does not own Resources and cannot therefore control Resource performance as is required with the current wording. The team members recommend an approach similar to that of Protocols 5.9 that has the Balancing Authority analyzing and reporting on system performance.
